LIST OF ORCHID PLANTS & SEEDLINGS

MAIL ORDERS ONLY.

These prices are on mail orders only. It requires additional time and expense to wait upon retail customers and as our greenhouses are not built or stocked as sales houses, we do not encourage local sales. Our greenhouse walk-ways are too narrow for most people to walk thru without damage to the plants and flowers on the benches. We have found that many Orchid Buyers make a practice of going from one grower's place to another's greenhouses and in this manner, spreading diseases and insects. And we find a small percentage of people are very inconsiderate of someone else's time and property. We have no objection to local buyers picking up their orders at our packing room if they wish.

Quantity Discounts.

We offer the following DISCOUNTS on all mail orders.

Orders for \$25.00 or more will receive free plants of our selection.

Orders for \$50.00 or more receive 10% straight discount ~~in~~ extra free plants of YOUR selection. Payment in full must accompany order.

Orders for \$100.00 or over receive 20% discount in free plants of the discount value, your selection. Payment must accompany order.

OUT OF SEASON DISCOUNT (During January and February only) receive Double the regular above Discount. We can do this because this period is our slack season when we are not rushed and your orders can be selected and reserved for shipment as soon as the weather permits.

SHIPPING. Our prices ~~DO NOT~~ include delivery charges. We advise Express shipments on all except the smallest orders. Parcel post shipments are limited in size and weight and SOMETIMES receive rough handling enroute. Express Shipments are insured by the express Co. We do not advise shipping plants during the time of the year when freezing weather can be expected enroute to you, but we will ship at anytime you say, but can not be responsible for damage enroute if you insist that the shipment be made during cold weather.

NO C.O.D. ORDERS, PLEASE.

GROWING INSTRUCTIONS. We do not advise that you spend your good money on correspondence courses in orchid growing. We believe that more and better information is available in the many books on orchid culture that are available and at much less cost to you. We have primary growing instructions which are free for the asking and any special problems that you run across, we will try to help you with without charge.

NEW VARIETIES. There are quite a number of NEW and unusual varieties offered thruout this list.

SUBSTITUTIONS. We do not substitute unless you tell us that we may. If we have your permission to do so, we always send you something of equal or greater value.

SUPPLIES. While we do not stock orchid growing supplies, we are able to tell you where they may be obtained. Please drop us a card if you need any such information.

Cymbidium Orchids

Cymbidiums are one of the most profitable orchids from a commercial viewpoint, as they are heavy producers of long lasting flowers in a wide range of colors. They require cool night temperatures during the fall and winter months (down to 45 or 50 degrees above Zero.). After the plants are flowering size, otherwise they will not flower. However, when growing seedlings, a year or two may be saved by growing them under Cattleya temperatures until the plants have two or three bulbs, at which time they should be large enough to flower and then will need cool nights in order to set flower spikes.

We offer the following crosses.

- # 699. (Schegellii x Orchidvale) x Ethel Ward var. Oriole.
A large Rose-Red crosses to an Orange-Red blending to Orange-Yellow.
- # 734. (Rearson x Robin Adair) x Ethel Ward. A cross of two of the best Golden Yellow types. Both large Flowered.
- # 733. Peri Var. Mustard x Apollo F.C.C. Both parents fine Yellow, large flowered types.
- # 740. Clarissa Var. Almyra x Doris Aurea var. Cardinal. Both Parents are large Red flowered types.
- # 748. Rutana x Reginald. Both parents are large green flowered varieties, much in demand.
- # 749. Esmeralda A.M. x Alexanderii Westenbirt. A large golden green crossed to the worlds best known White variety.
- # 760. Oread x Alexanderii Westenbirt. A large Cream colored variety with the above large flowered white.

We offer TWO SIZES of plants in each of the above crosses.
The largest plants of the lot in 4 inch pots (repotted in Decemder (56)
Most of these have the first bulb made up or almost made up.
SMALLER PLANTS in 2½ to 2½ inch pots which will need larger pots very soon.

The larger size plants are \$2.50 each or the collection of one each of the above seven crosses for \$15.00.

The smaller size plants are \$1.50 each or the collection of seven plants for \$9.00.

Mature flowering size Cymbidiums.

We sold out of available mature plants last fall, but expect to have more to offer this summer and fall.

During our Cymbidium repotting season we expect to have a few back-bulbs to offer at very reasonable prices. If you are interested in these please write for our lists during May and June.

Cymbidium Orchids
Cymbidiums are one of the most profitable orchids from a commercial viewpoint, as they are heavy producers of long lasting flowers in a wide range of colors. They require cool night temperatures during the fall and winter months (down to 45 or 50 degrees above zero), after the plants are flowering stage, otherwise they will not flower. However, when growing seedlings, a year or two may be saved by growing them under Cactleya temperatures until the plants have two or three bulbs, at which time they should be large enough to flower and then will need cool nights in order to set flower spikes.

We offer the following crosses.

- # 732. (Schellii x Orchidvale) x Ethel Ward var. Oracle.
A large Rose-Red crosses to an Orange-Red blending to Orange-Yellow.
- # 733. (Pearson x Robin Adair) x Ethel Ward. A cross of two of the best Golden Yellow types. Both large flowered.
- # 734. Port Var. Mustard x Apollo F.C.C. Both parents like Yellow, large flowered types.
- # 740. Clarissa Var. Almyra x Delta Arca var. Cardinal. Both parents are large Red flowered types.
- # 741. Rutana x Reginald. Both parents are large green flowered varieties, much in demand.
- # 742. Esmeralda A.M. x Alexanderii Westendirt. A large golden green crossed to the world's best known White variety.
- # 750. Grand x Alexanderii Westendirt. A large Cream colored variety with the above large flowered white.

We offer TWO SIZES of plants in each of the above crosses. The largest plants of the lot in 4 inch pots (reported in December 1955) Most of these have the first bulb made up or almost made up. SMALLER plants in 2 1/2 to 3 1/2 inch pots which will need larger pots very soon. The larger size plants are \$2.50 each or the collection of one each of the above seven crosses for \$15.00. The smaller size plants are \$1.50 each or the collection of seven plants for \$9.00.

Mature flowering size Cymbidiums.
We sold out of available mature plants last fall, but expect to have more to offer this summer and fall.
During our Cymbidium reporting season we expect to have a few back-bulls to offer at very reasonable prices. If you are interested in these please write for our lists during May and June.

Miltonias.

Miltonia Princess Mary (Pink Flowered) x self.

Miltonia Queen (Red Flowered) x (Blueana x Limelight)

This pollin parent is Purple, gold and white.

Both of the above crosses are seedlings in 2 inch pots, they are potted in ground bark and will not be ready for delivery until May or June. Priced at \$3.00 each.

Odontonia Marin.

Our Hybrid of Miltonia Bleauna and Odontoglossum Pedroito, These are very variable in color, ranging in color from white, thru pink and rose shades to maroon-red and purple coloring. Not labeled as to color. Flowering size \$10.00, smaller plants at \$3.50 and \$5.00.

Odontonia Thisbe. Smaller flowered on the average than the above, mostly in white with various markings. Plants at flowering or near flowering size. \$5.00 each.

Odontioda Ariitea.

A Maroon-red flowered variety with flowers larger than the average Adontioda. We have only two or three plants available at \$10.00 each. Flowering size.

Odontoglossum Citrosmun. This is a central american variety which will stand higher summer temperatures than the above hybrids, BUT they require cool winter night temperatures in order to bring them into flower during the spring months. We grow these with our Cymbidiums during fall and winter and in early spring we move them into the cattleya houses and hang them from the roof bars, as the flower spikes are pendant and grow downwards from a new growth just starting. Flowers are pink and white and very fragrant, long lasting and heavy textured. Flowering size plants at \$5.00 and \$10.00.

Oncidtonia Lee Hirsch.

The Hybrid of Miltonia Spectabilis var. Mooreliana and Oncidium Rogersii. Called by some Miltonidium Lee Hirsch. Long slender spikes of Dancing Lady type flowers (much larger than the Oncidium parent produces) in several shades of yellow with various colored markings. Plants at \$10.00 of Flowering size. Smaller plants at \$5.00 each.

Oncidiums.

Oncidium Sarcodes. This is a very beautiful variety easy to grow, producing 2 to 4 foot sprays of golden brown and yellow flowers. very attractive. Flowering size plants \$5.00 smaller size plants at \$2.50 and \$3.50 each.

Oncidium Nona. The hybrid of Onc. Varicosum var. Rogersii and Oncidium Crispum. Plants near flowering size \$3.50 Smaller size plants at \$2.00 each.

Additional Unusual Hybrids in
young Plants

Cattleya Guttata. Grown from seed. This rare variety produces Spikes of six or more 2½ inch Green flowers with red-purple spots. and flowers for us during the winter months. Plants in four inch pots near flowering size at \$10.00. Smaller plants in 3 inch pots at \$5.00

#683. Laelia Tenebrosa Var. Walton Grange x Cattleya Empress Frederick Aurea. Both parents are Yellow flowered. One or two of the largest plants of this cross have flowered in beautiful yellow shades. These are vigorous growers which is unusual in a yellow hybrid. Plants in 3 inch pots are \$5.00. Larger plants in 4 inch pots at \$7.50 each.

#32. Sophronites Grandiflora x ~~EPLIDENDRON~~ Oncidiodes.

Something really different. Plants are very similar in growth to the Spphronites parent, being very dwarf. In two inch pots in bark at \$5.00 each. Only six plants available.

Other unusual varieties are scattered thru this entire list.

Later this year we hope to be able to offer seedlings of third generation self crosses of extra large flowered, pure white Phaeaeenopsis Doris. The parents of this cross produces flowers up to five and six inches in diameter.

We also have many other unusual hybrids in flasks and will offer the seedlings as soon as they are large enough to remove from Community Pots.

Special Offer of extra large plants
Of Cattleya Enid.

These plants are all divisions of the same plant, which flowers twice a year for us, producing very large, medium colored flowers, four to six on each flower spike. We have more than we need of this variety and offer six plants, each with two or more leads in eight inch pots at only \$5.00 each.

Cattleya Back-bulbs.

During our repotting season, from April to June, we usually have a number of unestablished Back-cuts of from two to four bulbs, which we offer at 50¢ each for regular varieties. Selected and Extra choice varieties are priced at \$2.00 and \$5.00 each back-cut.

Orchid Seed. We do not offer seed for sale as we used to do, because the average grower is not equipped and does not have the experience required to germinate orchid seed. Orchid seed is very perishable and must be planted as soon as possible after maturity. Most orchid seed after it is a few weeks old will not withstand conditions encountered in transit, even by airmail. Strictly fresh seed will usually, but not always, grow when sent air-mail as soon as the seed is ripe. SOOO--- we had most of our seed customers blaming us when they failed to germinate even this fresh seed. We do. However, EXCHANGE seed with other growers who are reliable and have something in seed that we can use.

Additional Unusual Hybrids in Young Plants

Cattleya Guttata. Grown from seed. This rare variety produces spikes of six or more 2 1/2 inch long green flowers with red-purple spots and flowers for us during the winter months. Plants in 3 inch pots near flowering size at \$10.00. Smaller plants in 2 inch pots at \$5.00.

#583. Iselia Tenbroeck Var. Walton Gregg x Cattleya Tenbroeck. Both parents are yellow flowered. One or two of the plants of this cross have flowered in beautiful yellow. These are vigorous plants which is unusual in a yellow variety. Plants in 3 inch pots are \$5.00. Larger plants in 4 inch pots at \$7.50 each.

#582. Sophronitis Grandiflora x EPHEMERON-Candidata. Something really different. Plants are very similar in growth to the Sophronitis parent, being very dwarf. In two inch pots in dark at \$5.00 each. Only six plants available.

Other unusual varieties are scattered thru this entire list.

Later this year we hope to be able to offer seedlings of third generation self crosses of extra large flowered, pure white Phaeonopsis Doris. The parents of this cross produce flowers up to five and six inches in diameter.

We also have many other unusual hybrids in flasks and will offer the seedlings as soon as they are large enough to remove from Community Pots.

Special Offer of extra large plants
Of Cattleya Enid.

These plants are all divisions of the same plant, which flowers twice a year for us, producing very large, medium colored flowers, four to six on each flower spike. We have more than we need of this variety and offer six plants, each with two or more buds in eight inch pots at only \$5.00 each.

Cattleya Back-bulbs.

During our reporting season, from April to June, we usually have a number of unestablished Back-bulbs of from two to four bulbs, which we offer at 50¢ each for regular varieties. Selected and Extra choice varieties are priced at \$2.00 and \$5.00 each back-cut.

Orchid Seed. We do not offer seed for sale as we used to do, because the average grower is not equipped and does not have the experience required to germinate orchid seed. Orchid seed is very perishable and must be planted as soon as possible after maturity. Most orchid seed after it is a few weeks old will not withstand conditions encountered in transit, even by airmail. Strictly fresh seed will usually, but not always, grow when sent air-mail as soon as the seed is ripe. 2000--- we had most of our seed customers planting us when they failed to germinate even this fresh seed. We do however, EXCHANGE seed with other growers who are reliable and have something in seed that we can use.

Dendrobiums.

These spray type orchids are becoming very popular. They are easy to grow and flower. The main requirements are as small pots as possible with compost which drains rapidly and dries quickly after watering.

#670. Dendrobium(Phalaenopsis x Formosum) x Undulatum. This hybrid averages one foot to 18 inches in height, produces long sprays of 2 to 3 inch flowers in pink, lavender and purple shades, long lasting and are in flower over a long period. Flowering size in 4 inch pots. \$3.50 and \$5.00 each. These are in shreaded bark.

Dendrobium Speciosum. This is a dwarf growing type producing long sprays of small cream colored flowers which last a long time. This variety is called the Rock lilly in Australia where it is native. It requires cool (Cymbidium) conditions during the winter months in order to flower it properly. Plants in four inch pots in bark. \$3.50 each.

756. Dendrobium Stratiodes x (Phalaenopsis x Formosum)

757. Dendrobium Stratiodes x Phalaenopsis(dark Purple Variety.

Both of the above hybrids are unflowered at this date but are making up the first flower spikes. Some plants are in osmunda in 2½ inch pots. Others are in bark in 3 inch pots. The largest plants of the lot, \$3.00 each. Smaller plants at \$2.00.

#725. Dendrobium Mantinii. The hybrid of Nobile and Fimbriatum Occulatum These are near flowering size and require cool conditions during winter months. They should produce flowers, usually in yellow shades, large for the size of the plant. Plants about 8 to 12 inches high, in three inch pots of Bark. \$3.00 each.

728. This is a repeat cross of Dendrobium Formosum Giganteum and Dalhousianum, two of the largest flowered dendrobiums that we know. The last time we offered these they sold out within a matter of weeks. Plants in 1½ inch pots. Best of the lot at \$2.00 each others at \$1.50

Dendrobium Superbiens. A natural hybrid of Dend. Phalaenopsis and Undulatum. Flowering size at \$3.50

Dendrobium Kingianum. A dwarf growing variety from Australia, easy to flower, producing sprays of tiny pink flowers. Rare in this country. Flowering size \$5.00

Dendrobium Kingianum x Speciosum. A very rare natural hybrid
Flowering size \$5.00

Dendrobium Stratiodes Hybrids. Tall growing large plants producing flowers in many colors of the Antelope type. Only a few large plants left to offer at \$5.00 each.

VANDAS

THESE ARE STRAP*LEAF TYPES in four inch pots.

700. Vanda Faustii x Memoria of Iwasaki. Variable colors.

727. Vanda Herziana x Rothschildiana. Blue shades.

693. Vanda Puna x Herziana. Light blue.

695. Vanda Puna x Faustii. Probably blue also.

The above plants are in four inch pots. Best of the lot are \$3.00 each. Smaller plants at \$2.00.

VANDA TRICOLOR. Flowering (large) plants at \$10.00 each.

NEW HYBRID SEEDLINGS

779. *Cattleya Chamberliana* x *Laelia Zanthina*.

This selected variety of *Chamberliana* has flowers of a copper red color. *Laelia Zanthina* is butter yellow. Should produce some very unusual cluster type flowers in many shades. Community pots of 15 to 20 seedlings at \$10.00 each. Bare-root seedlings are \$1.00 each. Plants established in 1½ inch pots are \$1.50 each. Delivery in May or June.

#780. *Cattleya Trianae* (large Medium Colored Variety) x *Laelia Harpophyllum*, with clusters of 3 inch orange-red flowers. This cross should produce Medium size flowers in clusters of Orange-red color. Community pots of 15 to 20 plants are \$10.00 each. Bare-root plants are \$1.00 each. Plants established in 1½ inch pots are \$1.50. May and June Delivery.

#788. *Cattleya Joyce Hannington* (large winter White) x *L.C. Schroderae*, with a real true RED lip and petals and sepals glistening white. We are frank in saying this is an experimental cross and the offspring may produce colored flowers but we expect the lips on them to be red or pink in color. Price is the same as the above two hybrids.

#758. *Laelia Ancepts Alba*. Some of these may be all white, others will be white with purple lips. Plants in 1½ inch pots only at \$1.50 each.

#774. *C. Leopoldii* x *B.C. Heatonensis*. A very unusual hybrid and should produce some very interesting results. This cross did not produce many fertile seed and we have only a few plants to offer. Plants established in 1½ inch pots, June delivery at \$2.00 each.

766. *Cattleya Cowaniae* (large White) x Dark-Red *Cattleya Chamberliana*. The result here should be very unusual. We have only a few plants left to offer at \$2.00 each, established in 1½ inch pots.

737. *Brasavola Digbyana* x *C. Intermedia Aquinii*. This *Aquinii* is the rare splashed variety. Result unknown at this time but should be very unusual. Established plants in 1½ inch pots at \$2.00 each.

#724. *L.Cattleya Elmstead Gem*. The hybrid of *Cattleya Bicolor* and *Laelia Zanthina*. We offered this for the first time last year. Since then a few plants have flowered in 2½ inch pots and are beautiful. Some are Chartruse, others are green and a couple were green with a border of red dots on the petals. Flowers on these small plants were three inches across and very heavy textured, lasting over six weeks. A very few plants left to offer, some in 1½ inch pots in Osmunda, others in 2 inch pots in bark. \$2.50 each.

#697. *Cattleya Eleanore Alba* x *Cattleya Leopoldii* (green Variety). This is named *Cattleya Sydney T. Wright*. One of them has flowered and was a beautiful shade of Green with a reddish lip. Medium size and very heavy textured. Only a few plants left to sell. Plants established in 1½ inch pots are \$2.00. Larger plants in three inch pots are \$5.00 each.

#684. *Laelia Tenebrosa* x *Cattleya Aclandiae*. Very unusual, dwarf growing plants, something really different, only six plants in 2½ inch pots in bark. \$3.00 each.

CATTLEYA HYBRIDS
MOSTLY YOUNG PLANTS, SOME ARE FLOWERING SIZE WHERE
INDICATED ON THIS LIST, OTHERS ARE NEAR FLOWERING.

#518. C. Hardyana Alba x C. Eleanore ALBA. we have only a very few of these. They are slow growers and not very vigorous. White, purple liped flowers during the summer months. Plants at \$2.50 each. these are a year or two from flowering.

#626. L.C. Peggy Huffman. Our Hybrid of L.C. Princess Margaret and Cattleya Aquinii which has dark purple splashes of color on the tips of the petals so that the flower appears to have three lips.. About half of these seedlings have had splashed flowers when they flower. the others are not splashed but are light lavender with dark purple lips. All are heavy textured. Flowering size in the splashed varieties are \$10.00 each. Flowering size in the unsplashed type are \$2.50 and unflowered plants are \$5.00 each. We expect that about one-half of these unflowered plants will produce the splashed flowered which are in big demand and very rare and unusual.

638-642. Cattleya Georgie Aldridge. Another of our splashed crosses. C. Gatton Ruby x C. Aquinii. This is very simular to the above hybrid, perhaps a little later flowering. We have both splashed and not-splashed types and unflowered plants at the same prices as the above #626.

#629 B.L.C. Afterglow x C. Brussels Alba. This is a new cross as yet unflowered. The Afterglow parent is a large yellow brasso type flower with lavender shading. The Brussels is of course a White-purple lip variety. Some very interesting and unusual varieties should appear when these flower. Plants about one to two years from flowering at \$5.00 each. Most of these plants have very unusual growth, being very nearly like Brassovola Digbyana in leaf and bulb structure and coloring.

#625-634. L.C. Hiawatha This is a cross of L.C. Aphrodite and C. Warneri alba-both white purple liped varieties but the few which have flowered have been very light lavender with dark lips. Some white petaled forms may show in this cross. Flowering size and those which will flower this year are \$5.00. Smaller plants at \$3.00

#618. L.Purpurata, white with Blue-Purple lip crossed to B.C. Empress of Russia, A large pure white with green throat. A few of this cross have flowered for us and have varied very considerably, mostly very large fringed lip colored flowers, one was ten inches accross, a few have been albas with a large gold area in the throat and lip with a spot of purple. Plants to flower this year at \$5.00. Smaller size at \$3.00

#615. C. Clotho. The cross of C. Enid and C. Trianae. A few of this cross have flowered and are medium color with darker lip. Winter. Only a few plants at or near flowering size at \$3.00 each.

#577 B.L.C. Nannette x C. Gaskelliana -white variety. We have only five plants of this cross to offer. Should be white but there may be some colored varieties show up. Unflowered plants in four inch pots at \$5.00 each.

#644. L.C. Callistoglossa. The hybrid of a fine variety of colored Laelia Purpurata and a beautiful large Cattleya Gigas. None of these have flowered. These plants are near flowering size and should start to flower this year \$5.00 each.

CATTLEYA HYBRIDS IN FLOWERING AND
NEAR*FLOWERING SIZES.

- B.L.C. Elloit Markell. The hybrid between B.C. Appollo and L.C. Gene Colt. very large plants mostly with two or three leads producing extra large flowers in Medium shades with purple fringed lips. \$10.00 each.
- B.C. Maronae. Large plants producing very large pinkish-lavender flowers with lips of the same color having a heavy fringe. \$10.00 each.
- L.C. Eve. prolific summer flowering hybrid which varies from light to dark lavender, usually with dark purple lips and gold markings in the throat. \$2.50 to \$5.00 each. The large size have flowered, the smaller sizes should flower within a year or so.
- C. Forerunner. Light lavender to Medium purple shades, prolific flowering, all with purple-red lips and usually with white to yellow eyes on the upper lip. Summer to fall. \$2.50 to \$5.00. The larger plants are flowering size.
- C. Frances Elaine. Our #358. The hybrid between C. Gloriette and C. Enid. These are quite variable in color and markings. No two are exactly alike. Season varies also, some summer, others fall and winter flowering. \$2.50, \$3.50 and \$5.00 each. The two larger sizes are flowering size.
- C. Falco. The hybrid of C. Dupreana and the Yellow C. Dowiana. These are for the most part very dark purple with gold veined lips. Mostly fall and winter flowering. The flower size is not as large as some other hybrids but the color is much darker than most. Flowering size at \$5.00 others at \$2.50 and \$3.50.
- C. Fabia. The hybrid of Cattleya Labiata and the Yellow C. Dowiana. The color and season is very similar to the above. We have flowering size plants only of this variety at \$5.00
- L.C. Canhamiana. The hybrid between Laelia Purpurata from Brazil and Cattleya/ø/ Mossiae from Venezuela. Flowers from Easter to Mothers Day. Quite variable. Some having white petals and deep purple lip, others being lavender with dark lips. These are not labeled as to color. All are prolific flowering and easy to grow. Flowering size at \$5.00
- L.C. Aphrodite. The hybrid between Laelia Purpurata and Cattleya Mendilli from Columbia. Very light (almost white) petals with a very dark purple lip. A couple of weeks earlier than the above cross. Flowering size at \$5.00
- C. General Pultney. These are all selected varieties of a Christmas and New Years flowering hybrid with light silvery-lavender petals and dark lip, with yellow throat having gold veining. all large plants with two or more leads \$10.00 each.
- C. Trianae. The CHRISTMAS ORCHID. Selected varieties of Imported plants from Columbia. Large flowered types, usually in light shades with yellow throats and a spot of lavender to purple on the lip. Two sizes of plants \$5.00 and \$10.00. All flowering sizes.

Cattleya Hybrids- Continued
Flowering and Near Flowering sizes.

#543 Cattleya Speciosissima x C. Sander. A cross of two very Nice whites with purple lips BUT all of these which have flowered are Colored from light to dark lavender with dark purple lips. Low growing plants, flowering size and to flower this year at \$3.00 each.

#561 Cattleya Suzanne Hye. This is a cross of two white flowered specie Cattleyas but the plants of this cross which have flowered are very light lavender with a golden throat and a spot of reddish-purple on the lip. Very vigorous and prolific flowering. Mostly winter. Flowering size at \$5.00 small plants at \$2.50

#604. L.C. Wellsiana. A winter and early spring flowering hybrid with light lavender petals and a purple spot on the lip. Yellow throat. Flowering size at \$5.00. Smaller plants at \$2.50

#542-571. C. Empress Frederick. The hybrid between C. Mossiae from Venezuela and the Yellow Cattleya from Costa Rica. This is a beautiful orchid, mostly winter flowering with Medium to very dark colored flowers with a large gold veined lip. Flowering size at \$5.00. Smaller plants at \$3.00

#530. Cattleya Ellen Sutton x Mossiae Wagnerii. The hybrid of two pure white parents but these are very light lavender, unusual in that the lips are the same color as the petals. very variable in season. Plants at \$4.00 and \$5.00 flowering size.

#570. L.C. Plymouth(yellow) x C. Edithae var. White Empress. The hybrid between a yellow Cattleya and a pure white variety. A few of these have flowered and have been colored lavender with a slight yellow overcast. Some whites or yellows may show up in the unflowered plants. These are priced at \$3.00 and \$4.00 each.

#637. L.C. Archdeacon. The hybrid of L.C. Princess Margaret and a Dark Purple form of Cattleya Hardyana. Some beautiful varieties have flowered in this cross. Most have been very dark in color and all have been large flowered. Plants to flower this year at \$5.00 smaller size at \$2.50. Variable in season, summer, fall and winter.

C. Leda. A beautiful small flowered hybrid. Dark colored with purple and gold veining on the lip. only a very few plants at \$5.00 of flowering size. Unflowered at \$3.00

#9B Cattleya Marion Davis. A pure white Cattleya Hybrid producing flowers with light yellow throats at various seasons. We do not have many of these. Plants all flowering size at \$5.00. Flowers are medium size.

Laelia Purpurata. We have several forms of this beautiful orchid from the Jungles of Brazil. Mostly tall growing plants producing an abundance of flowers during the spring months. The light lavender with dark veins in the petals and purple lip is priced at \$5.00. The white petaled with deep purple lip is \$10.00, and we have the Pure white with white lip form which is very, very rare at \$25.00. This white variety is lower growing than the other forms of this orchid.

C. Mossiae. A very prolific specie from Venezuela. These are all selected forms from a large importation years ago and are much larger flowered than the average wild plant. \$2.50 and \$5.00

Cattleya Hybrids - Continued
Flowering and Near Flowering sizes.

#543 Cattleya Speciosa x C. Sanders. A cross of two very nice whites with purple lips BUT all of these which have flowered are colored from light to dark lavender with dark purple lips. Now growing plants, flowering size and to flower this year at \$3.00 each.

#561 Cattleya Swaziana Hye. This is a cross of two white flowered specie Cattleyas but the plants of this cross which have flowered are very light lavender with a golden throat and a spot of reddish-purple on the lip. Very vigorous and prolific flowering. Mostly winter. Flowering size at \$5.00 small plants at \$2.50

#604. L.C. Wellstana. A winter and early spring flowering hybrid with light lavender petals and a purple spot on the lip. Yellow throat. Flowering size at \$5.00. Smaller plants at \$2.50

#542-571. C. Empress Frederick. The hybrid between C. Mossiae from Venezuela and the Yellow Cattleya from Costa Rica. This is a beautiful orchid, mostly winter flowering with medium to very dark colored flowers with a large gold veined lip. Flowering size at \$5.00. Smaller plants at \$3.00

#530. Cattleya Ellen Sutton x Mossiae Wagnerii. The hybrid of two pure white parents but these are very light lavender, unusual in that the lips are the same color as the petals. Very variable in season. Plants at \$4.00 and \$5.00 flowering size.

#570. L.C. Plymouth (yellow) x C. Edithae var. White Empress. The hybrid between a yellow Cattleya and a pure white variety. A few of these have flowered and have been colored lavender with a slight yellow overcast. Some whites or yellows may show up in the unflowered plants. These are priced at \$3.00 and \$4.00 each.

#637. L.C. Archdeacon. The hybrid of L.C. Princess Margaret and a Dark Purple form of Cattleya Harbiana. Some beautiful varieties have flowered in this cross. Most have been very dark in color and all have been large flowered. Plants to flower this year at \$5.00 smaller size at \$2.50. Variable in season, summer, fall and winter.

C. Leeds. A beautiful small flowered hybrid. Dark colored with purple and gold veining on the lip. Only a very few plants at \$5.00 of flowering size. Unflowered at \$3.00

#98 Cattleya Marion Davis. A pure white Cattleya Hybrid producing flowers with light yellow throats at various seasons. We do not have many of these. Plants all flowering size at \$5.00. Flowers are medium size.

Iselia Purpurata. We have several forms of this beautiful orchid from the jungles of Brazil. Mostly fall growing plants producing an abundance of flowers during the spring months. The light lavender with dark veins in the petals and purple lip is priced at \$5.00. The white petaled with deep purple lip is \$10.00 and we have the pure white with white lip form which is very, very rare at \$25.00. This white variety is lower growing than the other forms of this orchid.

C. Mossiae. A very prolific specie from Venezuela. These are all selected forms from a large importation years ago and are much larger flowered than the average wild plant. \$2.50 and \$5.00

Special list of Cattleya Hybrids.

We have only ONE PLANT OF EACH OF THE FOLLOWING. Please select substitutions or second choices, when ordering from this page. Mostly Flowering or near flowering sizes.
